**DETAILED ACTION**

***Allowable Subject Matter***

1. The indicated allowability of claims is withdrawn in view of the newly discovered reference(s) 5833470 to Harrison et al. Rejections based on the newly cited reference(s) follow.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 ,9 and 11-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Harrison et al (5,833,470).

Regarding claim 1, Harrison disclose a disc reproducing apparatus (Figs. 1,2 and 4, column 5) having a screen display control unit controlling display of a prepared screen, said screen display control unit comprising:

mode setting means for setting, in accordance with externally provided instruction information (play or coach instruction)c, one of a screen display mode and a screen blanking mode; and

control means for permitting output of a display signal to said prepared screen when

said screen display mode is set by said mode setting means and inhibiting output of the display signal to said screen when said screen blanking mode is set by said mode setting means, wherein said permitting and said inhibiting are in a case where audio information is reproduced from a disc. (column 5, lines 34-57, Fig. 4).

Method claim 12 corresponds to apparatus claim 1, therefore method claim 12 is rejected by the same reason as applied to apparatus claim 1.

Regarding claim 9, Harrison further teaches a key input unit that is externally operated, wherein said instruction information is output in response to operation of a predetermined key of said key input unit (Figs. 3 and 5-9).

Regarding claim 11, Harrison teaches the disc is a disc having only said audio information to be reproduced or a disc having said audio information and image information to be reproduced (column 5, lines 50-57).

#### ***Allowable Subject Matter***

4. Claims 2-8 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
